IMAP/POP3 Account Import Format

> **username@domain.com:IMAP/POP3 server:Port:username@domain.com:password:0/1**

Where ;

- ➢ username@domain.com = Your mailbox account

- ➢ IMAP/POP Server = Your IMAP or POP server name

- ➢ Port = The IMAP or POP server port. Most IMAP servers by default use 143 and 993
Port 143 is mostly supported for STARTTLS/TLS. On the other hand, most default POP port is 110 or 995 (SSL).

- ➢ Username@domain.com = this is your username for the SMTP or POP3 account. Please note that if using free SMTP server or free POP servers, the username must include the domains such as john@gmail.com

- ➢ Password = This is your password for the SMTP or POP3 server

- ➢ 0/1= If the IMAP or POP server requires SSL or STARTTLS protocol, you must enter 1. Otherwise enter 0

Note: All entries for each account must be on a single line on a plain text file.
